FAST-N-LOCK
MOUNTING SYSTEM

PROTECTION

Designed to slip at target torque of approximately 40 in-lb. Ensures proper torque is reached and protects against over/under tightening.

CONICAL TIP

The cone shape is designed to self center and fit inside the bolt holes on the bowl to secure the seat in place and reduce movement.

FAST & SIMPLE

Eliminates need for multiple washers, making installation easier and faster.

SECURE

Designed to generate target clamp load of approximately 700lbs/bolt to prevent seat from coming loose.

Description

Centoco's new patented FAST-N-LOCK Mounting System takes the guessing out when tightening the hardware used to secure new seats. The specially designed fasteners "click"

when the appropriate torque is reached. This feature largely reduces the chance of getting call backs from customers for seats that have become loose over time.
